

Moreland Company USA

Thank you for allowing Mannington Resilient Floors to participate in the evaluation of Ultraply Underlayment. The installation team found Ultraply easy to install using standard installation methods. The Ultraply was easy to cut using a utility knife or saw. Ultraply's light color enabled the installers to easily view the fastener pattern. No problems were reported with the adhesive or patch bonding. Ultraply was used under Mannington's ProBac and Perimiflex products.

Ultraply meets Mannington's underlayment requirements as outlined in the Professional Installation Guide. Solid core construction, smooth veneer face grade, and exterior phenolic are inclusive with a quality product. Mannington also prefers that all underlayments be designed and intended for use under resilient products and are supplied with a warranty for that use. Manning does not endorse Ultraply underlayment. For it to do so would mean that Mannington would assume responsibility for all uses and warranty issues. All warranties and claims are to be addressed directly with the Moreland Company, USA. Please follow all recommended work practices and utilize the best materials available for the best results and customer satisfaction.

Sincerely,

A handwritten signature in blue ink that reads "Jason Wilde, Jr." in a cursive script.
